

Fuel Management - Get More Out of Every Drop

Keep a lid on your fuel budget. GreenRoad helps you get the most value for every gallon of fuel consumed and to reduce wastage. Our solutions help motivate safe, fuel-efficient driving practices, highlight fuel-burning vehicles and idling hot spots, and draw your attention to potential fuel theft. In addition, they help you comply with required reporting in the areas of fuel consumption.

Drive Your Way to Lower Fuel Costs

GreenRoad's experience confirms that you can reduce your fuel bills by up to 25% by tuning up driver behaviour and modifying activities that drag down fuel economy.

In the Moment...

GreenRoad Driver Behaviour and Fleet Performance is the most effective solution available for changing your drivers' fuel-burning driving habits. The system's in-cab coaching, documentation and incentive programs reduce the incidence of gas-guzzling sharp braking, rapid acceleration and high-speed driving, resulting in a significant increase of average MPG.

...and for the Long Term

GreenRoad gives fleet managers numerous tools for managing fuel costs across the organization. Set regional targets and budgets for fuel consumption, idling rates, and fuel efficiency, give drivers actionable steps to achieve them. Then track progress on a macro level down to individual drivers and vehicles.

GreenRoad's dashboards and reports provide managers and drivers with in-depth information for monitoring and optimising fuel consumption.

Drivers can analyse their past performance, and managers can keep an eye on trends by region, driver and vehicle as they develop. Exception reports draw attention to increased fuel usage and enable identification of root causes.

Dashboard measurements include:

- Fuel efficiency and trends
- Fuel consumption
- Idling rates and trends

Reduce Idle Threats

Idling the engine is a tempting convenience for your drivers, but a fuel-guzzling security hazard for the company. GreenRoad makes it easy for you to identify the wasteful idling habits of your drivers - and to educate and incentivise for improved behavior.

Monitoring makes you and your drivers aware of the times, occasions, and locations most prone to idling. Then you - and they - can take action to resolve the underlying causes.

Stop Fuel Theft

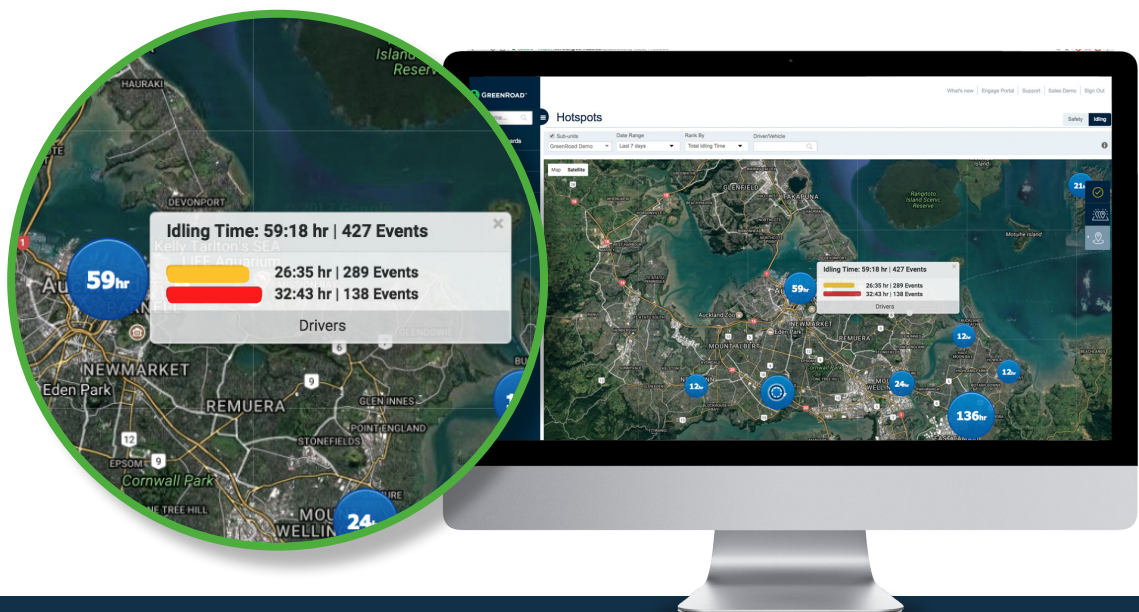

By integrating fuel card purchase data with GreenRoad's trip records, you can quickly identify fuel purchase irregularities and pilferage. Flag purchases that exceed fuel tank capacity, do not match tank fuel levels or take place at a distance from where the vehicle is located.

Save More than Fuel

Fuel-efficient driving is both safe and environmentally responsible. Keeping a lid on fuel consumption yields significant social, financial and environmental dividends, including lower carbon emissions, reduced noise pollution and more. This is in addition to the general benefits that society derives from your fleet's improved driving records - led by the incalculable value of lives saved.

More GreenRoad Tools for Better Fuel Management

Need to submit an International Fuel Tax Agreement (IFTA) form? GreenRoad makes it easy to comply. Summary and detail reporting provides the necessary information about distance driven by each vehicle, including lists of drivers, vehicles and distances by state.
